EDUCATION

University of Waterloo

Expected 2030

Bachelor of Mathematics, Honors, Co-op

Double Major: Applied Math (Scientific Machine Learning) and Statistics, Computing minor

Relevant courses: Calculus I, II, Linear Algebra, Data Structures, Probability, Functional Programming, Statistics

SKILLS & CERTIFICATIONS

Programming: Python, SQL, Go, JavaScript, TypeScript, Bash, Racket
Data Analysis : Pandas, NumPy, Excel, Power BI, Plotly, Data Cleaning, Statistical Analysis
Machine Learning: scikit-learn, PyTorch, Feature Engineering, Model Evaluation, Random Forest, K-Means
Data Engineering: MySQL, Supabase, ETL Pipelines, REST APIs, Docker, CI/CD
Developer & AI Tools: Git, GitHub, Cursor, Codex, Postman, VS Code

EXPERIENCE

Software Developer

November 2025 - Present

Savi Finance

Toronto, Canada

- Developed **4 REST API endpoints** with backend validation and **MySQL data persistence** to capture and structure trip data for mileage tracking and financial reporting used by **1.5k+ users**.
- Built backend data workflows to process and validate trip records, ensuring reliable **data ingestion, storage, and retrieval** for analytics and cost reporting.

Co-founder (Visit [here!](#))

January 2026 - Present

Wanderers.ai (Hack the Canada Project 2026)

Waterloo, Canada

- Built a **machine learning recommendation system** using **Random Forest** and **K-Means clustering** to match students based on shared interests, enabling data-driven small-group meetups.
- Analyzed onboarding and acquisition funnels using **Python (Pandas)** and **SQL**, tracking **CTR, activation, and retention metrics** to identify user drop-offs and design growth experiments improving **conversion by 18%**.

AI Growth Strategy Intern

January 2026 - Present

EdVisingU (Riipen Labs)

Remote, Canada

- Conducted **data analysis using Python (Pandas) and SQL** to evaluate user engagement metrics and identify opportunities to improve onboarding and retention.
- Performed **LLM-assisted analysis** using the OpenAI API and web-scraped datasets to synthesize product feedback and usage patterns, informing AI feature prioritization and pricing strategy.

TECHNICAL PROJECTS

RoadSafe AI – Car Accident Severity Predictor 🚗

Python, Supervised Machine Learning, scikit-learn, K-Means, Pandas, NumPy, Matplotlib, Evaluation Metrics

- Analyzed **50k+ accident records**, engineering **data** to predict accident severity across high-risk regions.
- Designed a supervised learning pipeline using **Scikit-learn**, performing feature engineering and model evaluation to achieve **80% prediction accuracy** and identify **high-risk accident patterns**.

ChurnLens - Customer Churn & Revenue Analytics 📊

Python, scikit-learn, SciPy, MySQL, Plotly, Tableau, Exploratory Data Analysis, Buisness Dashboard

- Analyzed **80k+ records** from a **Kaggle dataset** to identify churn drivers and customer lifetime value patterns.
- Built **SQL pipelines (CTEs, JOINS, CASE)** and developed **retention KPIs and Tableau/Plotly dashboards** to segment **high-risk users**, uncover **revenue leakage**, and support **data-driven retention strategies**.

VectorMate - Neural Network-Driven Chess Engine 🏁

Python, PyTorch, Flask, Hugging Face, Render, Vercel

- Training a supervised Neural Network chess engine on **20,000+ Lichess games**, targeting **1000+ ELO**
- Implementing **CNN policy network** integrated with **Minimax** and **Alpha-Beta** pruning targeting **30%+ top-1 (exact) move prediction accuracy** on **held-out test games** while improving **inference latency** and **search depth**
